

City of Archer City Public Notice

We are required to monitor the source of your drinking water for E. coli. Results of the monitoring are used to determine whether water treatment at the Archer City Water Treatment Plant is sufficient to adequately remove Cryptosporidium from your drinking water. We did not complete all monitoring or testing on schedule and therefore, we may not be able to determine what treatment modifications, if any, must be made to assure adequate Cryptosporidium removal.

If you want more information about the nature and significance of this violation, you may contact Billy Ballard at (940) 574-4621.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
